## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Japanese Patent No. 57-161368 (JP '368).

JP '368 discloses a sliding element 5 comprising dimples 6 on a sliding face. As seen best in Figures 2 and 3, the element comprises a plurality of dimple sections having dimples 6 arranged in an annular form (i.e. the outermost radial dimples would be one section). A plurality of dam sections are disposed between the sections (i.e. the next section radially inward is separated by a dam section). One of the dam sections is on an edge opposite the fluid side (i.e. side closest to A). The dimples are inclined in a rotary direction and longitudinally long along the inclination. The width (a) is smaller than the length (b).

3. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Pecht (5,090,712).

Pecht discloses a sliding element 76' comprising dimples 94 on a sliding face. As seen best in Figure 5, the element comprising a plurality of dimple sections having dimples 94 arranged in an annular form. A plurality of dam sections 96 are disposed between the sections in an annular form (the dam lines 96 would be somewhat 'jagged' between the dimples, but do extend annularly). Dam section 82' is along an edge opposite the fluid side. The dimples are

inclined radially and longitudinally long (i.e. when extended in the direction of the parallelogram not the diamond shape).

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
